30-Day Readmission for Mental Illness

Name: 30-Day Readmission for Mental Illness
Short/Other Names: Not applicable
Description: The indicator measures the risk-adjusted rate of readmission following discharge for a mental illness.

Interpretation: Lower rates are desirable.

HSP Framework Dimension: Health System Outputs: Person-centred
Areas of Need: Living With Illness, Disability or Reduced Function
Geographic Coverage: All provinces/territories
Reporting Level/Disaggregation: National, Province/Territory, Region
Indicator Results: http://yourhealthsystem.cihi.ca/epub/?language=en

Identification Information
Name: 30-Day Readmission for Mental Illness
Short/Other Names: Not applicable
Indicator Description and Calculation
Description: The indicator measures the risk-adjusted rate of readmission following discharge for a mental illness.

Note: For further details, please see the General Methodology Notes.

General Methodology Notes

Calculation:
Risk-adjusted rate for each region = Observed number of readmissions in each region ÷ Expected number of readmissions in the region × Canadian average readmission rate

Unit of Analysis: Episode of care
An episode of care refers to all contiguous inpatient hospitalizations in general and psychiatric hospitals and all day surgery visits regardless of diagnoses. To construct an episode of care, a transfer is assumed to have occurred if the following condition is met:
- Admission to a general/psychiatric hospital or day surgery facility occurs on the same day as discharge from another general/psychiatric hospital or day surgery facility

Calculation:
Geographic Assignment: Place of residence
Calculation: Type of Measurement: Rate - per 100
Calculation: Adjustment Applied: The following covariates are used in risk adjustment:
- For a detailed list of covariates used in the model, please refer to the Model Specification document.

Method of Adjustment: Logistic regression

Description:
Number of episodes of care for a mental illness discharged between April 1 and March 1 of the fiscal year

Inclusions:
1. A mental illness is identified by DSM-IV/DSM-5 diagnostic category in Ontario Mental Health Reporting System (OMHRS) data or by the most responsible diagnosis (MRDx) ICD-10-CA codes in Discharge Abstract Database (DAD)/Hospital Morbidity Database (HMDB) data
2. Diagnosis codes for mental illness:
   i. Substance-related and addictive disorders: ICD-10-CA: F10–F19, F55, F63.0; DSM-IV diagnostic category: (d) substance-related disorders; DSM-5 diagnostic category: (p) substance-related and addictive disorders
   ii. Schizophrenia and other psychotic disorders: ICD-10-CA: F20, F21, F22, F23, F24, F25, F28, F29; DSM-IV diagnostic category: (e) schizophrenia and other psychotic disorders; DSM-5 diagnostic category: (b) schizophrenia spectrum and other psychotic disorders
   iii. Mood disorders: ICD-10-CA: F30, F31, F32, F33, F34, F38, F39, F53.0, F53.1; DSM-IV diagnostic category: (f) mood disorders; DSM-5 diagnostic category: (c) bipolar and related disorders or (d) depressive disorders
iv. Anxiety disorders: ICD-10-CA: F40, F41, F93.0, F93.1, F93.2, F94.0; DSM-IV diagnostic category: (g) anxiety disorders; DSM-5 diagnostic category: (e) anxiety disorders

v. Selected disorders of personality and behaviour: ICD-10-CA: F60, F61, F62, F68 (excluding F68.1), F69; DSM-IV diagnostic category: (p) personality disorders; DSM-5 diagnostic category: (r) personality disorders

vi. Other disorders

ICD-10-CA

F42, F43, F44, F45, F48.0, F48.1, F48.8, F48.9, F50, F51, F52, F53.8, F53.9, F54, F59, F63 (excluding F63.0), F64, F65, F66, F68.1, F70–F73, F78, F79, F80–F84, F88, F89, F90, F91, F92, F93.3, F93.8, F93.9, F94.1, F94.2, F94.8, F94.9, F95, F98.0, F98.1, F98.2, F98.3, F98.4, F98.5, F98.8, F98.9, F99, O99.3

DSM-IV diagnostic category

(a) Disorders of childhood/adolescence
(c) Mental disorder due to medical conditions
(h) Somatoform disorders
(i) Factitious disorders
(j) Dissociative disorders
(k) Sexual and gender identity disorders
(l) Eating disorder
(m) Sleep disorder
(n) Impulse-control disorders
(o) Adjustment disorders

DSM-5 diagnostic category

(a) Neurodevelopmental disorders
(f) Obsessive-compulsive and related disorders
(g) Trauma- and stressor-related disorders
(h) Dissociative disorders
(i) Somatic symptom and related disorders
(j) Feeding and eating disorders
(k) Elimination disorders
(l) Sleep-wake disorders
(m) Sexual dysfunctions
(n) Gender dysphoria
(o) Disruptive, impulse-control and conduct disorders
(s) Paraphilic disorders
(t) Other mental disorders

3. Discharges between April 1 and March 1 of the following year (period of case selection ends on March 1 to allow for 30 days of follow-up)

4. Sex recorded as male or female

5. Admission to a general or psychiatric hospital (Facility Type Code = 1, 5)

Exclusions:
1. Records with an invalid health card number
2. Records with an invalid code for province issuing health card number
3. Records with an invalid admission date
4. Records with an invalid discharge date
5. Discharges as deaths (Discharge Disposition Code = 07 for DAD/NACRS records; Discharge Reason Code = 2 or 3 for OMHRS)
6. Cadaveric donor or stillbirth records (Admission Category Code = R or S)
7. Records that are dead on arrival (Discharge Disposition = 11 for NACRS)

Description:
Cases within the denominator with a readmission for a mental illness within 30 days of discharge after the index episode of care

Inclusions:
1. An episode of care is considered a readmission if the two following conditions are met:
   a. It has occurred within 30 days of discharge of an index episode; and
   b. A mental illness was identified the same way as for the denominator (see Denominator for criteria to select diagnosis).

Background, Interpretation and Benchmarks
Readmission to inpatient care may be an indicator of relapse or complications after an inpatient stay. Inpatient care for a person living with a mental illness aims to stabilize acute symptoms. Once stabilized, the individual is discharged, and
Rationale: Subsequent care and support are ideally provided through outpatient and community programs in order to prevent relapse or complications. High rates of 30-day readmission could be interpreted as a direct outcome of poor coordination of services and/or an indirect outcome of poor continuity of services after discharge.

Interpretation: Lower rates are desirable.

HSP Framework Dimension: Health System Outputs: Person-centred

Areas of Need: Living With Illness, Disability or Reduced Function

Targets/Benchmarks: Not applicable

Hermann R, Mattke S. *Selecting Indicators for the Quality of Mental Health Care at the Health System Level in OECD Countries*. 2004.

Availability of Data Sources and Results

Data Sources: DAD, HMDB, NACRS, OMHRS

Type of Year: Fiscal

First Available Year: 2014

Last Available Year: 2017

Geographic Coverage: All provinces/territories

Reporting Level/Disaggregation: National, Province/Territory, Region

Result Updates: Every year

Indicator Results Web Tool: Health Indicators e-Publication

URL: [http://yourhealthsystem.cihi.ca/epub/?language=en](http://yourhealthsystem.cihi.ca/epub/?language=en)

Update Frequency: Not applicable

Quality Statement: Not applicable

Caveats and Limitations: Not applicable

Trending Issues: The *Diagnostic and Statistical Manual of Mental Disorders, Fifth Edition* (DSM-5) was implemented in the Ontario Mental Health Reporting System as of 2016-2017. Prior to 2016-2017, the fourth edition (DSM-IV-TR) was used. Due to the fact that the DSM-IV-TR and DSM-5 diagnostic categories are not fully comparable, there may be some shift in the distribution of cases across categories. Therefore, trending of 2015-2016 and 2016-2017 rates for Ontario may potentially be affected.

A 30-day readmission can occur in the same facility as the index episode or in a different facility. A readmission can be a planned or unplanned admission. Planned versus unplanned admissions cannot be distinguished in all available data sources. For jurisdictions where comprehensive information was available, rates including both planned and unplanned readmissions and only unplanned readmissions were compared, and they were not statistically significantly different. Published work has shown that few planned readmissions for mental illness within 30 days are scheduled by practitioners.
