

# Has a Regular Health Care Provider

Name	Has a Regular Health Care Provider
Short/Other Names	Percentage of Population With a Regular Health Care Provider The percentage of the population that reported having a regular health care provider
Description	A regular health care provider is defined as a health professional that a person sees or talks to when he or she needs care or advice about health. This can include a family doctor or general practitioner, a medical specialist or a nurse practitioner.
Interpretation	Higher percentages are desirable.
HSP Framework Dimension	Health System Outputs: Access to comprehensive, high-quality health services
Areas of Need	Getting Better
Geographic Coverage	All provinces/territories
Reporting Level/Disaggregation	National, Province/Territory, Region
Indicator Results	<a href="#">Accessing Indicator Results on Your Health System: In Depth</a>
Identifying Information	
Name	Has a Regular Health Care Provider
Short/Other Names	Percentage of Population With a Regular Health Care Provider
Indicator Description and Calculation	The percentage of the population that reported having a regular health care provider
Description	A regular health care provider is defined as a health professional that a person sees or talks to when he or she needs care or advice about health. This can include a family doctor or general practitioner, a medical specialist or a nurse practitioner. Population age 12 and older who reported that they have a regular health care provider divided by the total population age 12 and older
Calculation: Description	Population estimates are based on weighted survey responses to reflect the total population.
Calculation: Geographic Assignment	Place of residence
Calculation: Type of Measurement	Percentage or proportion
Calculation: Adjustment Applied	None
Calculation: Method of Adjustment	Not applicable
Denominator	<b>Description:</b> Population age 12 and older (based on weighted survey responses) <b>Exclusions:</b> Non-response categories (refusal, don't know and not stated) are excluded as of 2009.
Numerator	<b>Description:</b> Population age 12 and older who reported that they have a regular health care provider (based on weighted survey respondents)
Background, Interpretation and Benchmarks	On a daily basis, many Canadians receive health care services, usually through nurse practitioners, general practitioners or family physicians. Having a regular health care provider is an important source of disease prevention and management. Factors affecting whether a person has a regular health care provider include age and sex. In 2016, the most common reason respondents gave for not having a regular health care provider was that they had not looked for one.
Rationale	Higher percentages are desirable.
Interpretation	Health System Outputs: Access to comprehensive, high-quality health services
HSP Framework Dimension	Getting Better
Areas of Need	Not applicable

Updates	Not applicable
Quality Statement	<p>Data for the Canadian Community Health Survey (CCHS) is collected yearly from a sample of approximately 65,000 respondents. CANSIM Table 105-0509 presents estimates from 2-year combined data and features estimates for all provinces and territories as well as for health regions. The 2-year combined data has higher precision (less variability) than annual estimates; annual CCHS estimates are not available at the health region level.</p> <p>Some values have data quality flags that indicate "use with caution" or "suppressed" due to high coefficients of variation: health regions with small populations and results disaggregated by age group or sex within small regions.</p>
Caveats and Limitations	<p>The CCHS covers the population age 12 and older living in the 10 provinces and 3 territories. Excluded from the survey's coverage are</p> <ul style="list-style-type: none"> <li>• Persons living on reserves and other Aboriginal settlements in the provinces</li> <li>• Full-time members of the Canadian Forces</li> <li>• Children age 12 to 17 living in foster care</li> <li>• The institutionalized population</li> <li>• Persons living in 2 Quebec health regions: Nunavik Region and Terres-Cries-de-la-Baie-James Region</li> </ul> <p>Altogether, these exclusions represent less than 3% of the Canadian population age 12 and older.</p>
Trending Issues	<p>As a result of a redesign in 2015, the CCHS has a new collection strategy and sample design. For this reason, Statistics Canada does not recommend making comparisons with CCHS data from 2001 to 2014.</p> <p>This indicator is calculated based on 2 years of pooled data from 2015 and 2016.</p> <p>Data for Ontario's local health integration networks and British Columbia's regional health authorities was received from Statistics Canada through custom tabulation requests:</p>
