

# Hysterectomy Rate

Name	Hysterectomy Rate
Short/Other Names	Not applicable
Description	<p>This indicator measures the age-standardized rate of hysterectomy provided to patients in acute care hospitals or same-day surgery facilities, per 100,000 women age 18 and older.</p> <p>For further details, please see the <a href="#">General Methodology Notes (PDF)</a>.</p>
Interpretation	Does not apply to this measure (i.e., there is no predefined preference for the measure score)
HSP Framework Dimension	Health System Inputs and Characteristics: Health system resources
Areas of Need	Not applicable
Geographic Coverage	All provinces/territories
Reporting Level /Disaggregation	National, Province/Territory, Region
Indicator Results	<a href="http://yourhealthsystem.cihi.ca/epub/?language=en">http://yourhealthsystem.cihi.ca/epub/?language=en</a>
Identifying Information	
Name	Hysterectomy Rate
Short/Other Names	Not applicable
Indicator Description and Calculation	
Description	<p>This indicator measures the age-standardized rate of hysterectomy provided to patients in acute care hospitals or same-day surgery facilities, per 100,000 women age 18 and older.</p> <p>For further details, please see the <a href="#">General Methodology Notes (PDF)</a>.</p>
Calculation: Description	<p>(Total number of discharges for hysterectomy for women age 18 and older ÷ total mid-year female population age 18 and older) × 100,000 (age adjusted)</p> <p>Unit of Analysis: Single admission</p>
Calculation: Geographic Assignment	Place of residence
Calculation: Type of Measurement	Rate - Per 100,000
Calculation: Adjustment Applied	Age-adjusted
Calculation: Method of Adjustment	Direct Standardization <b>Standard Population:</b> Canada 2011
Denominator	<b>Description:</b> Total mid-year female population age 18 and older <b>Description:</b> Total number of discharges for hysterectomy for women age 18 and older
Numerator	<b>Inclusions:</b> <ol style="list-style-type: none"><li>Hysterectomy is identified as any of the following procedure codes recorded in any position of the procedure code fields: CCP: 80.2–80.6 CCI: 1.RM.89^, 1.RM.91^ or any of the following codes: 1.RM.87.CA-GX, 1.RM.87.DA-GX, 1.RM.87.LA-GX with extent attribute coded as SU</li><li>Age at admission 18 years and older</li><li>Sex recorded as female</li><li>Admission to an acute care institution or same-day surgery facility (Facility Type Code = 1 or A)</li></ol> <b>Exclusions:</b> <ol style="list-style-type: none"><li>Newborn, stillbirth or cadaveric donor records (Admission Category Code = N, R or S)</li><li>Procedures coded as out of hospital and abandoned after onset (Intervention Status Attribute = A or OOH Indicator Flag = Y)</li><li>2018–2019 data onward: Discharges with medical assistance in dying (MAID) (Discharge Disposition Code = 73)</li></ol>
Background, Interpretation and Benchmarks	
Rationale	As with other types of surgical procedures, variation in hysterectomy rates can be attributed to numerous factors, including differences in population demographics, physician practice patterns and availability of services. Utilization rates may reflect the level of uncertainty about the appropriate use of this surgical procedure. The right level of utilization is not known.
Interpretation	Does not apply to this measure (i.e., there is no predefined preference for the measure score)
